# SAVE YOUR ASH TREES

OR

***Removal and destruction of Emerald Ash Borer (EAB) infected trees is NOT NECESSARY!  
At EMS our certified professionals use the state-of-the-art ARBOR-JET TREE-äge™  
treatment method that TREATS AND PREVENTS EAB.***

## **HOW WE TREAT EAB**

Yes, that's right—you can save your Ash trees! Contrary to popular belief there is a treatment for EAB, and EMS Outdoor is committed to spreading the word. You will be happy to know that cutting down and destroying your Ash tree(s) may not be the solution. If your Ash tree is less than 50% affected by EAB, and more than 4 inches in diameter, we can perform this tree injection method to **treat** your tree. Even if your Ash tree is showing no signs of EAB infection we can also use this system to **prevent EAB**. By using the insecticide Emamectin Benzoate (TREE-äge™) and using ARBOR-JET's latest technology in micro-injection, we are able to essentially paralyze the EAB, causing it to no longer be able to bore. This system also ensures that an accurate dose of this chemical is placed inside the tree, eliminating the spraying and pouring of chemical into the environment. We need to drill tiny holes for the injection sites at the base of the tree (# to be determined by the size). Trees will recover quickly and the results are worth it. Studies have shown this treatment to last up to 2+ years.

## **WHY WE LIKE IT**

- ARBOR-JET injection is an **environmentally responsible application method**—unlike spraying or soil drenching, ARBOR-JET's closed system injects directly into the tree, protecting your family, the applicator, and the environment around us
- ARBOR-JET injection application can occur **safely near pets, children, customers and employees**. With a closed system there is no need to rope off areas or close businesses
- Reliable, effective results **ranked #1** in University studies
- Remember: Protecting your trees and beautifying your property **increases real estate value** (which is increasingly important in our current economy)

## **PRICING**

\$10.00 DBH. Meaning \$10.00 per inch of your tree's diameter— measure the diameter 4.5' off of the ground. For example, if your tree is 6 inches DBH your tree would be \$60.00 to treat.

## **100% MONEY-BACK GUARANTEE**

EMS Outdoor is so committed to the excellence of the ARBOR-JET injection method and TREE-äge™ results that upon determining that your Ash tree is a good candidate for this treatment we will guarantee for **two years** that your tree will not die from EAB infestation after treatment. If your tree dies from EAB within the two-year window after the injection application, we will refund to you **100% the treatment price**. You've got nothing to lose. Call us today and allow us to help **prevent and treat** EAB in your precious Ash trees!
